

# John D. Martin

jmarti3@stevens.edu  
<https://jdmartin86.github.io>

EDUCATION	<b>Stevens Institute of Technology</b> Ph.D. in Mechanical Engineering	<b>2015 – Present</b>
	<b>Columbia University</b> Graduate coursework in Computer Science	<b>2013 – 2015</b>
	<b>University of Maryland</b> Double B.S. in Physics and Aerospace Engineering	<b>2009 – 2012</b>
RESEARCH EXPERIENCE	<b>DeepMind - Edmonton</b> <i>Research Scientist Intern – Host: Joseph Modayil</i> I am studying prediction for continual reinforcement learning using constructivist principles for perception.	<b>June 2020 –</b>
	<b>Google Brain - Montréal</b> <i>Research Scientist Intern / Student Researcher – Host: Marc G. Bellemare</i> I studied methods for continual reinforcement learning that exploit notions of invariance to explore more efficiently, focusing on settings with non-stationary data and application to deep neural networks.	<b>May 2019 – Feb. 2020</b>
	<b>Robust Field Autonomy Laboratory - Stevens Institute of Technology</b> <i>Graduate Research Assistant – Advisor: Brendan Englot</i> I develop models and algorithms to support safe and efficient learning for robotic systems. My current work lies at the intersection of optimization, control, probabilistic modeling, and optimal transport. Much of my previous work relates to Bayesian non-parametric learning.	<b>2015 –</b>
	<b>Alfred Gessow Rotorcraft Center - University of Maryland</b> <i>Undergraduate Research Assistant</i> Researched various techniques to control an RC-sized tilt-wing air vehicle. My studies focused on dynamic modeling, system identification, feedback control, and software design for embedded processors.	<b>2011 – 2012</b>
	<b>Autonomous Vehicle Laboratory - University of Maryland</b> <i>Undergraduate Research Assistant</i> Investigated navigation strategies for novel robotic platforms, including an insect-inspired crawling robot. I implemented <i>optical-flow algorithms</i> for quad-rotor velocimetry, integrated sensors, and developed a method for maneuvering toward radiation sources.	<b>2010 – 2011</b>
	<b>Robotics@Maryland - University of Maryland</b> <i>Project Leader</i> Managed anywhere from 20 to 30 undergraduates designing and fabricating an autonomous underwater robot from scratch. With the help of other leaders, I coordinated project demonstrations, design reviews, and university showcases. Additionally, I provided technical advice to junior engineers throughout the design and fabrication process.	<b>2009 – 2011</b>
PROFESSIONAL EXPERIENCE	<b>Piasecki Aircraft Corporation</b> <i>Part-time Analytical Consultant</i> I provide technical direction for new research initiatives relating to autonomous systems that require artificial intelligence and machine learning software. I lead the proposal writing efforts for various SBIR/STTR and DARPA programs, where my contributions have resulted in full Phase II SBIR funding. Among my technical contributions, I have developed an adaptive flight	<b>2017 – 2019</b>

controller, a deep model for object detection, 6-DOF aircraft simulator, and a communication interface for an Iridium data link.

### **Sikorsky Aircraft**

**2012 – 2015**

*Robotics and Flight Controls Engineer*

For three years, I worked with a small group of engineers and researchers that took two experimental helicopters to first flight. For the X-76, I was a lead contributor on the motion planning effort, which involved designing, writing, and flight testing code. For the S-97, I contributed designs for flight-critical subsystems, such as the main rotor servos, and triply-redundant flight control voting logic. Below are some further details.

- Developed, integrated, and flight tested motion planning algorithms on a full-scale S-76 helicopter
- Developed a C-based *simplex linear program solver* to optimize speeds along a curve
- Developed and maintained visualization software with OPEN-SCENE-GRAPH and PYTHON
- Developed, integrated, and tested flight control algorithms on the X-76 OPV and S-97 helicopters
- Developed a simulation interface to emulate the entire S-97 avionics system
- Generated C-code from MATLAB then integrated it into a real-time operating system
- Participated in peer reviews to qualify flight-critical software
- Reviewed and generated avionic-systems wiring schematics

### **TEACHING EXPERIENCE**

**Stevens Institute of Technology, Advanced Robotics (ME-654)**

**Spring 2020**

*Guest Lecture: Seeking Certainty in An Uncertain World*

I gave a guest lecture centered on uncertainty-sensitive decision making in RL.

**Stevens Institute of Technology, Advanced Robotics (ME-654)**

**Spring 2017**

*Guest Lecture: Reinforcement Learning Basics*

I co-taught a lecture with other instructors, introducing students to the basics of RL.

**Stevens Institute of Technology, Senior Design (ME-423)**

**Fall 2014**

*Guest Lecture: Sikorsky R&D: Motion Planning for Autonomous Rotorcraft*

I gave an industry guest lecture on motion planning algorithms for autonomous helicopters.

### **REFEREED PUBLICATIONS**

Stochastically Dominant Distributional Reinforcement Learning,

**John D. Martin**, Michal Lyskawinski, Xiaohu Li, Brendan Englot,  
*37th International Conference on Machine Learning (ICML), (2020).*

Variational Filtering with Copula Models for SLAM,

**John D. Martin\***, Kevin Doherty\*, Caralyn Cyr, Brendan Englot, John Leonard,  
*International Conference on Intelligent Robots and Systems (IROS), (2020).*

Autonomous Exploration Under Uncertainty via Deep Reinforcement Learning on Graphs,

Fanfei Chen, **John D. Martin**, Yewei Huang, Jinkun Wang, Brendan Englot  
*International Conference on Intelligent Robots and Systems (IROS), (2020).*

Fusing Concurrent Orthogonal Wide-aperture Sonar Images for Dense Underwater 3D Reconstruction,

John McConnell, **John D. Martin**, Brendan Englot  
*International Conference on Intelligent Robots and Systems (IROS), (2020).*

Sparse Gaussian Process Temporal Difference Learning for Marine Robot Navigation,

**John D. Martin**, Jinkun Wang, Brendan Englot,  
*2nd Annual Conference on Robot Learning (CoRL), (2018).*

Extending Model-based Policy Gradients for Robots in Heteroscedastic Environments,

**John D. Martin**, Brendan Englot,  
*1st Annual Conference on Robot Learning (CoRL), (2017).*
